

LEDSone — GSC Canonical Validation & Shopify Markets

Step-by-Step Operations & Testing Guide

Purpose: Handover guide for a new SEO/Shopify team member to investigate canonical conflicts safely, test live URLs, request indexing, and monitor GSC validation.

Current example: <https://ledsone.co.uk/pl/> — Shopify Poland market URL. GSC previously showed user canonical /pl/ but Google-selected /. Live testing later showed the page is crawlable/indexable and currently declares /pl/ as canonical.

1. What the issue means

A canonical conflict occurs when the site declares one preferred URL but Google selects another. Do not assume every affected URL needs a manual canonical change.

2. Check Shopify Markets first

Confirm that the affected country/region is intentionally configured. In this case Poland is included in the EU Market.

3. Open the URL

Confirm whether the affected URL loads, redirects, or errors.

4. Inspect GSC

Record User-declared canonical and Google-selected canonical.

5. Inspect live HTML

View Page Source and search for canonical. Record the href.

6. Check hreflang

Search Page Source for hreflang and confirm the market/language relationships.

7. Test Live URL

Confirm crawl allowed, fetch successful and indexing allowed.

8. Request Indexing

Only after the live page is verified. The request adds the URL to a priority crawl queue; it does not guarantee indexing or canonical selection.

9. Monitor validation

Leave the validation cycle running. Pending means Google has not finished checking those URLs; it is not a confirmed failure.

Evidence from the actual investigation

Market	Status	Includes	Customizations
EU Market	Active	Poland	\$🇵🇱
International	Active	25 regions	\$🌐🌐

Do not change production settings blindly

- Do not remove Poland from Markets simply because /pl/ appears in GSC.
- Do not add noindex or delete /pl/ without evidence.
- Do not change hundreds of canonical tags based on one URL.
- Do not remove hreflang without checking the market/language structure.
- Do not repeatedly request indexing.
- Do not restart validation while it is still processing.
