

LEDSone — GSC “Crawled – Currently Not Indexed”

Investigation, Testing & Validation SOP

Current snapshot: 8,633 affected pages; report last updated 18 Sep 2026. Four sampled URLs were currently indexed when inspected.

1. Meaning

Google crawled a URL but it is not currently included in the index. The status is not automatically a technical error.

2. Report vs URL Inspection

The Page Indexing report is a dated batch snapshot. URL Inspection can show a more current individual URL state.

3. Workflow

Record count/date → sample URLs → inspect current status → inspect reason/canonical if unindexed → test live page if needed → confirm pattern → take targeted action → validate.

4. Do not mass-request indexing

Do not request indexing for thousands of URLs. Use URL Inspection for diagnosis and targeted requests only.

5. Start New Validation

Starts a new validation cycle; it does not immediately index all URLs and does not guarantee indexing.

6. Last update

GSC does not provide a scheduled future refresh date. Monitor the Last update date and reassess after it changes.

Current Page Indexing report: multiple excluded reasons and 8,633 Crawled – currently not indexed.

Crawled – currently not indexed report: 8.63K affected pages and example URLs.

Sample 4: an /nl/ product URL from the current report is currently indexed.

Crawled – currently not indexed report last updated 9/18/26.

Start New Validation button on the old validation screen.

Quick SOP

- Open report → record count/date.
- Sample different URL patterns.
- URL Inspection → check current status.
- If indexed: record; do not request indexing.
- If unindexed: inspect exact reason/canonical.
- Fix root cause only after pattern confirmation.
- Use Request Indexing selectively.
- Use Start New Validation after a verified fix.
- Monitor Last update.
